

Ranger Remote Control

Giving you control over every classroom

Empower teachers to manage ICT activity effectively!

Ranger Remote Control is intuitive and easy to use, allowing teaching staff of all technical abilities to control ICT use confidently and effectively during classes.

Teachers can remotely view, record and play staff and students' screen activity, to demonstrate work, interact with the class, provide support and gather feedback. This empowers your teaching colleagues, while freeing up technical staff to focus on network-management issues.

You can save additional time and effort by providing remote assistance to teaching staff, using 'Chat' and 'Control' functions, without having to move around the school or college. And by combining Remote Control with Ranger for Networks or Ranger Primary, you are also able to remotely control any PC on the network, from within the LAN Ranger interface.

All of the tools you need, to do more in less time...

Empowering and effective

Ranger Remote Control is intuitive and easy to use, allowing your teaching colleagues to feel confident in their ability to use the technology at their disposal, while ensuring that students benefit from a dynamic and stimulating, yet safeguarded, learning environment.

Invaluable monitoring and control

Teachers can monitor individual students' machines from their PC and display multiple screens simultaneously, for an overview of the whole class, or take control of any student's PC to demonstrate work or to help if they are not keeping to task.

Ranger Remote Control allows teachers to restrict access to particular Web sites or applications, such as the spell-checker during English lessons and the calculator in maths. They can also gain the immediate attention of the whole class, by instantly locking all screens and keyboards or blocking all Internet access – at the click of a button.

Benefits

- Giving teachers control over ICT in the classroom frees up technical staff to focus on network management.
- Intuitive interface means that teaching staff of all technical abilities can confidently use Ranger Remote Control.
- If help is required, remote assistance can be provided using the 'Chat' and 'Control' functions – there's no need to dash from one classroom to the next to resolve problems.
- Monitor users in any location, ensuring that resources are being properly used.
- Record and replay screen activity to demonstrate good practice or as evidence of misuse.
- Runs on your existing ICT infrastructure and requires no additional hardware.
- Designed specifically for education.
- Works with other Ranger software or as a stand-alone product.

Enhanced teaching and support tools

With Ranger Remote Control, teachers can interact with individual students, groups or the whole class, without leaving their desks or taking their eyes off other students!

Teachers can broadcast their own screens or those of students, to display work, highlight areas of difficulty and even provide discreet one-to-one support via instant messaging and 'Help' features.

Optimal assessment and organisation

Your teaching colleagues can use Ranger Remote Control to set and administer tests, gather feedback through instant surveys and dynamically group students, based on their responses. Ranger Remote Control also gives them the option of creating fully automated lesson plans and of distributing and collecting work automatically – all of which saves time and effort for both teachers and students.

Helping you to help yourself...

The right choice

When it comes to specific requirements for your school or college, you're the expert – we just provide you with the tools to help you to achieve your network management objectives, in the most effective way possible.

Ranger offers a comprehensive portfolio of products, to simplify and enhance your basic network – and you're free to select the best combination to suit your specific needs.

So, there isn't one 'right' way of doing things – just the right choice of partner...

But don't take just our word for it!

"Using Remote Control, teachers are able to limit access in their classrooms to applications, Internet sites or even computers. I'd have no hesitation in recommending the entire Ranger suite of applications."

Steve Smith, ICT Network Manager, Oxclose Community School, Tyne and Wear

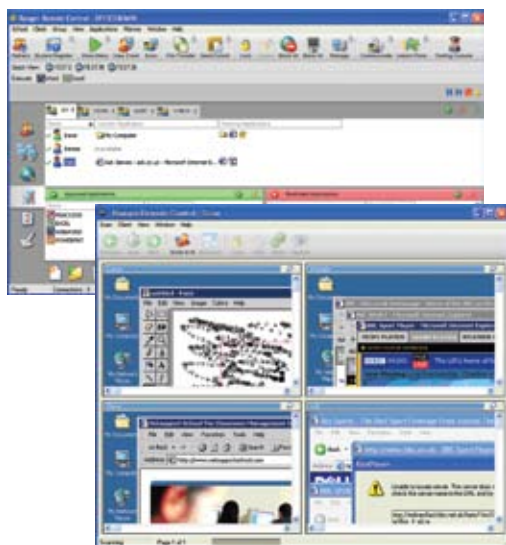

"Ranger Remote Control has replaced NetOp as our classroom-monitoring software. Members of staff have, so far, experienced little difficulty in the conversion process."

Colin Thomas, IT Network Administrator, Rossall School, Lancashire

"We've set up Ranger Remote Control in each of our computer rooms to allow teachers to praise the efforts of individual students by displaying work on the interactive whiteboard. You can also spot and help students in difficulty and manage the classroom, eg by making all PCs inaccessible while you are talking to the class. This has been a big hit with our teaching staff."

Anthony Nutbeam, Assistant Principal and Director of Networks, Astor College, Kent
